SURVEYOR'S REPORT

The alignment for this project was established along the south lines of Section 3 and 4. Because no plans were available for the existing bridge, the basis of bearings is assumed. The stationing of 50+00 was assumed near the center of Bruce Ditch. Right-of-way widths for 205th Avenue are not shown due to the lack of recorded or unrecorded information regarding width. In addition, the evidence of possession in the vicinity of the right-of-way lines is inconsistent throughout the length of the project.

The purpose of this survey was to locate lines and corners for the design of a bridge replacement and as a basis for describing any right-of-way which may be necessary for this project. It is not to be considered a property retracement survey.

The corners of Sections 3, 4, 9 and 10 were found per the Lake County Surveyor's Office reference ties. The southeast corner of Section 9 could not be found but was reestablished using the reference ties for that corner. It is my opinion that the uncertainty associated with these corners is less than one foot in any direction.

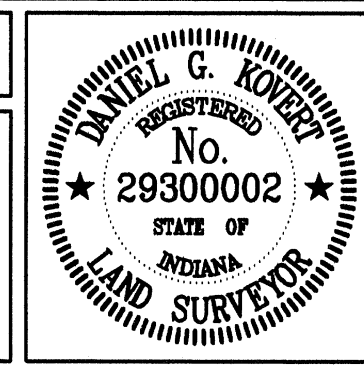

A mag nail was set at P.O.T. Stations 45+00, 50+00 and 55+00. References for these corners are as shown below. In addition, the southwest corner of Section 3 was calculated as P.I. Station 53+28.00. Because reference ties are available for this corner, they are not shown hereon. Since these are original monuments, there is no uncertainty in their use for alignment purposes.
