Φ Father - The term sperm refers to the male reproductive cells and is derived from the Greek word (σπέρμα) sperma (meaning "seed"); In the types of sexual reproduction known as anisogamy and oogamy, there is a marked difference in the size of the gametes with the smaller one being termed the "male" or sperm cell; A uniflagellar sperm cell that is motile is referred to as a spermatozoon, whereas a non-motile sperm cell is referred to as a spermatium; Sperm cells cannot divide and have a limited life span, but after fusion with egg cells during fertilization, a new organism begins developing, starting as a totipotent zygote; The human sperm cell is haploid, so that its 23 chromosomes can join the 23 chromosomes of the female egg to form a diploid cell; In mammals, sperm develops in the testicles and is released from the penis;

Φ Mother - The ova are developed from the primitive germ cells which are imbedded in the substance of the ovaries; Each primitive germ cell gives rise, by repeated divisions, to a number of smaller cells termed oögonia, from which the ova or primary oöcytes are developed; Human ova are extremely minute, measuring about 0.2 mm; in diameter, and are enclosed within the egg follicles of the ovaries; as a rule each follicle contains a single ovum, but sometimes two or more are present; By the enlargement and subsequent rupture of a follicle at the surface of the ovary, an ovum is liberated and conveyed by the uterine tube to the cavity of the uterus; Unless it is fertilized it undergoes no further development and is discharged from the uterus, but if fertilization takes place it is retained within the uterus and is developed into a new being;

Φ The "First" of Myself - A zygote (from Greek ζυγώτος zygōtos "joined" or "yoked", from ζυγοῦν zygoun "to join" or "to yoke"), is the initial cell formed when two gamete cells are joined by means of sexual reproduction; In multicellular organisms, it is the earliest developmental stage of the embryo; A zygote is always synthesized from the union of two gametes, and constitutes the first stage in a unique organism's development; Zygotes are usually produced by a fertilization event between two haploid cells - an ovum (female gamete) and a sperm cell (male gamete) - which combine to form the single diploid cell; Such zygotes contain DNA derived from both parents, and this provides all the genetic information necessary to form a new being;
